

Think different, pack in molded fibre

Tomatoes, peaches, pears  
Apples, melons...

## Fruits & Vegetables

Developing over many years packaging specifically dedicated to fruits and vegetables, SEM offers you a complete range of products suited to the requests of your markets.

### Protection...

Designed to prevent rotation and contacts between fruits, SEM trays protect and promote your products.

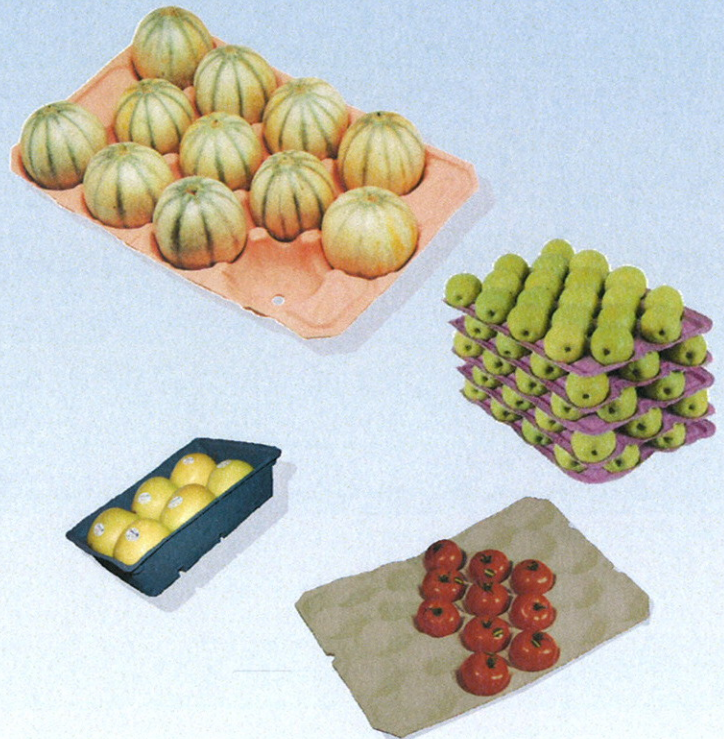

The porosity and the controlled absorption of humidity allow better ventilation and ensure optimal conservation of goods during transport and their presentation in the distributor's shelves.

### Distribution...

Our products provide an excellent presentation of fruits and vegetables in a natural product with an attractive aesthetic.

They also ensure a perfect assertion of the products on the inclined plans of the distributor's shelves.

Our trays are also recyclable and biodegradable in the same circuit as papers and cardboard trays.

### Economy...

SEM fibre trays have a great economic advantage compared to similar products in synthetic materials.

Moreover, they allow retailers to simplify sorting of the empty packaging and value their wastes.

### Our range... →
